

CallMe – Helpdesk System

Made with Spring Boot and Angular

Welcome to the CallMe presentation, a new system designed to streamline IT support for public organizations.

The Problem: Managing IT Support

Public departments often struggle with IT support requests.
Current methods are inefficient.

Outdated methods cause significant delays and disorganization.

-  Email overload
-  Spreadsheet chaos
-  Hard to track progress

This leads to slow response times and frustration.

Creating and Managing Requests

The screenshot shows the 'Listagem de Chamados' (Calls List) page in the CallMe application. The left sidebar contains navigation links: Início, Internos, Criar Chamado, Externos (highlighted), Usuários, and Sair. The main content area is titled 'Listagem de Chamados' and 'Chamados Detalhados'. It displays two call cards. Each card shows the sender's name and email, a description, the date and time, the status, and a token. The first card has a status of 'ABERTO' and a 'Detalhar' button. The second card has a status of 'Sem status' and a 'Detalhar' button.

Simple form to create new support requests, capturing all details.

The screenshot shows the 'Criar Chamado' (Create Call) form in the CallMe application. The left sidebar is the same as the previous screenshot. The main content area is titled 'Criar Chamado'. It contains a form with the following fields: 'Chamado' (text input), 'Descrição' (text area with 'Teste criação'), 'Status' (dropdown menu with 'Aberto' selected), 'Atribuir Nível Técnico' (dropdown menu), and 'Mensagem para o técnico' (text area with 'Ex: Por favor, verificar com urgência...'). At the bottom, there are two buttons: 'Salvar' (blue) and 'Excluir Chamado' (red).

Comprehensive list of requests for easy filtering and management by technicians.
